

Leaving no one behind

# Work related

- Develop and implement digital health information system to monitor health indicator to help provinces district and hc to monitor performance based financing indicators to identify GAP so that they can achieve target
- To transform country HIS from fragmented. Paper based to a single platform web base system that generates comprehensive information for monitoring, Response to planning, decision making
- To coordinate, working with partners joining the health sector reform, reaching uhc and tracking sdg

# Challenges

- Convince leaders competing priorities in a crowded, under resourced landscape
- Culture of evidence based, use of info is new, changing behaviours takes time , thus resistance to change is everywhere
- vertical programs prefers to stay vertical
- Human Capacity of all disciplinary and number
- Internet connectivity and IT equipment

# Perspectives (How?)

- Develop automatic dashboard to produce health information
- Regular publication national health information report
- Regular monitoring and supervision to subnational level
- Work closely with vertical programs applying digital health to produce reliable and time manner information for planning
- In order to succeed in digital health information workout well foundation on paper base system
